

## Previous Week's Plan (2/23)

For last week, our overall goal was to finish up any existing bugs and polish our application for the feature complete release, which was due last Friday night.

**Back-end (Nick, Todd, Riley)** Work with the crowdsourcing team to finish component.

**Front-end (Aaron, Roe, Geoffrey)** Front-end team is largely done, just finish up the remaining bugs related to frontend code.

**Full-stack (Sonja, Ryan)** Change crowdsourcing to support multiple categories and multiple sources. Also add URL verification to the form as well as fully connect the component to the backend.

## Progress

As a whole, we completed the entire feature complete release in time to meet the deadline last Friday. We also opened a few issues that were found in the final testing phases before the submission.

**Back-end (Nick, Todd, Riley)** Fully integrated the crowdsourcing into the backend so that workers may submit content and have that content approved by administrators within the application.

**Front-end (Aaron, Roe, Geoffrey)** Spent the week largely fixing bugs to make the application functional. Bugs included: categories were not defined on candidate pages, hanging tests, ... and more (please see our Github Issues for more).

**Full-stack (Sonja, Ryan)** Added multiple categories and support for multiple sources. Also added URL validation for the sources to that each source is guaranteed to be a URL in the backend.

## Current Week's Plan

This week's plan is to finish a release candidate to submit before the Friday deadline.

**Back-end (Nick, Todd, Riley)** This week the backend team will be split along fixing bugs and open issues for the app and also helping the Full-stack team complete the interviews and usability studies.

**Front-end (Aaron, Roe, Geoffrey)** Geoffrey will spend the week completing and assigning bugs / tasks to the team. Aaron and Roe will tackle the task of adding more webdriver tests to ensure that our use cases are well tested.

**Full-stack (Sonja, Ryan)** Crowdsourcing is largely done. A new feature will be added that allows workers to edit / delete their sources and categories after they have been added to the submission form. They will also lead the usability studies and the writeups for the week.
